Thank you for your interest in Bell System Software.

I'm happy to enclose descriptions of software currently available under license from AT&T.

We will be pleased to answer any questions you may have about this material. We will try to give you the information you need to evaluate these programs in terms of your particular needs.

As a start, the programs in this brochure are organized into six categories: mathematics and statistics, graphics, system programs, utility programs, engineering and scientific programs and computer management aids.

A technical description has been prepared for each program. When possible, references to technical publications are given. Hardware and language requirements are listed. And current fees are quoted for each package.

These fees and technical descriptions, of course, are subject to change without notice. And complete terms would be set forth in an agreement, should you decide to obtain a license. Some of the more important provisions can briefly be described as follows:

You can obtain a license to use any of the software packages in this catalog for your internal business purposes.

- the license would be non-exclusive;
- your initial license fee gives you the right to use the program on a specific central processing unit (CPU) or in a specific data processing center, depending on the particular software involved;
- you will be asked to identify CPU's by type, serial number and location;
- in many cases, you will have the option to use the software on additional CPU's at reduced fee and under the same conditions;
- in some cases, in addition to the license fee, a patent royalty for CPU use may be applicable;
- all software is to be kept confidential;
- all software comes "as is"—with no maintenance agreements or technical support;
- software is generally provided in Source Code Format on magnetic tape with appropriate documentation.

Licensees may, in certain instances, also be permitted to provide software to their customers in machine language form. Terms and conditions of such an option are available upon request.

It is our current practice to honor requests from qualified non-profit educational institutions for reduced fee licenses to selected Bell System Software. Use of the software under such reduced fee licenses is limited to academic and educational purposes directly related to teaching or degree-granting programs. Administrative or commercial use of the software is not authorized under such a license.

For more information about any of the software programs listed in this catalog, please contact me at the above address or call 919-697-6530.

Very truly yours,

OTIS L. WILSON
Technology Licensing Manager
